

Week 6 — Financial Peer Benchmark: Methodology & Caveats

inGen Dynamics · robotics & humanoid peer-comp model for benchmarking and fundraising narratives. All figures from public disclosures.

1. Peer universe

Public: iRobot (IRBT), Teradyne (TER), Cognex (CGNX), Symbotic (SYM) — robotics/automation/vision/test peers with SEC reporting. **Private:** humanoid/robotics peers from the Week 2 dossier — Figure AI, Apptronik, Agility Robotics, 1X Technologies, Neura Robotics, Gecko Robotics — selected for disclosed, press-verifiable rounds.

2. Metrics & definitions

Public: revenue, revenue YoY growth, gross margin, R&D as % of revenue, operating margin, net margin (FY2024 from 10-K/10-Q and earnings releases). **Private:** round, date, amount, lead investors, post-money valuation.

Comparables: revenue growth and margin/R&D intensity for public peers; **funding-per-employee** (total disclosed raised ÷ headcount) as a capital-efficiency proxy for private peers.

3. Caveats on comparability (important)

- EV/Revenue is intentionally NOT hard-coded: enterprise value needs a live market cap (and net debt) on a chosen date. The workbook flags this; compute it at use-time from a current quote so it is never stale.
- Public vs private are not directly comparable: private valuations are negotiated post-money figures from primary rounds, not market-clearing prices, and reflect future-deployment optionality rather than current earnings.
- Robotics-hardware gross margins (iRobot ~21%, Symbotic ~18%) are structurally far below vision/test peers (Cognex ~68%, Teradyne ~58%); never benchmark across those groups without noting the business-model difference.
- Funding-per-employee is a rough proxy: headcounts are approximate and disclosed rounds may be partial, so treat it as directional, not precise.
- FY2024 cells marked 'approx/annualised' (yellow in the workbook) — notably Cognex full-year and Symbotic GM/R&D; — should be confirmed against the exact filing before external use.

4. Reproducibility

Public anchors live in `src/financials/peer_data.py` with a source per row. For filing-exact 12-quarter histories, `src/financials/edgar_fetch.py` pulls Revenues / GrossProfit / R&D / OperatingIncome from the SEC EDGAR companyfacts API (no key; run with `INGEST_ALLOW_NETWORK=1` and a descriptive User-Agent). Private rounds each cite a public press source; extend the table via Crunchbase free tier as new rounds are announced.

Prepared by Ziheng Wang · inGen Data Analyst internship · Week 6 · 2026-06-15. Public figures from SEC filings/earnings; private rounds press-sourced. Benchmark is for context, not investment advice; verify EV/Revenue against a live quote before external use.
