

Week 2 Competitive Intelligence Dossier

15 priority peers across inGen-aligned robotics verticals

Purpose: convert the Week 1 robotics landscape into structured competitive intelligence that product, strategy, and leadership stakeholders can scan quickly. This dossier focuses on public positioning, product claims, target customers, partnership signals, hiring direction, and patent-review priorities.

Executive Summary - What the peer map shows

Vertical	Priority peers	Key observation	Implication for inGen
Education robotics	Miko, LEGO Education, UBTECH Education	Eldercare peers emphasize companionship, independence, and caregiver burden reduction.	Frame product value around a specific user problem, not only robot capability.
Eldercare / assisted living robotics	Intuition Robotics (ElliQ), Temi, Labrador Systems	Education peers win through curriculum, engagement, and school/channel distribution.	Frame product value around a specific user problem, not only robot capability.
Humanoid robotics	Figure AI, Agility Robotics, Unitree Robotics	Security peers compete on patrol, monitoring workflows, and robot-as-a-service operations.	Frame product value around a specific user problem, not only robot capability.
Indoor security / surveillance robotics	Knightscope, Cobalt Robotics, SMP Robotics	Outdoor patrol peers emphasize autonomous inspection, field robotics, and difficult environments.	Frame product value around a specific user problem, not only robot capability.
Outdoor patrol / perimeter robotics	Asylon Robotics, Boston Dynamics (Spot), ANYbotics	Humanoid peers compete heavily on capital, AI talent, hardware velocity, and deployment credibility.	Frame product value around a specific user problem, not only robot capability.

Primary pattern: the strongest competitors do not sell "robots" generically. They attach robotics to a narrow operational pain point - elder support, STEM engagement, security awareness, industrial inspection, logistics labor, or humanoid workforce substitution.

Executive Summary - Analyst takeaways

Takeaway	Details
1. Product clarity wins	Each peer is strongest when it owns a crisp use case and buyer. Fari, Senpai, Sentinel, Aido Rover, and Aido Humanoid should each be communicated through a problem-solution-user-value structure.
2. Platform claims need proof points	Origami AI and PIC 2.0 can create a stronger ecosystem story, but public-facing materials should connect platform claims to concrete product examples.
3. Hiring signals suggest technical focus	Humanoid and field-robotics peers appear more engineering and AI intensive than education incumbents. This supports monitoring AI/ML, controls, perception, and deployment roles as a competitive signal.
4. Patent review should be targeted	Instead of broad patent counting, focus review on manipulation, perception, human-robot interaction, autonomous navigation, docking, patrol, and sensing.
5. Caution for external use	Live hiring counts and patent tables should be refreshed before external use because public career pages and patent databases change frequently.

Recommended next step: use this Week 2 dossier to prioritize sources for Week 3 ingestion pipelines, especially competitor websites, career pages, patent queries, and market data sources.

1. Intuition Robotics (ElliQ)

Eldercare / assisted living robotics

Website	https://www.elliq.com/	HQ	Israel / United States
Founded	2016	Priority	High
Positioning	Digital care companion for older adults	Target customer	Older adults, families, care organizations, aging agencies

Why selected

Strong overlap with Fari: companion robotics, aging support, home engagement, and caregiver support positioning.

Top public product claims

Companionship; proactive engagement; wellness check-ins

Relevance to inGen

Closest direct peer to Fari on eldercare companionship and social engagement.

Public signal / partnership notes

Aging agencies and public-sector eldercare programs reported in public materials Public materials continue positioning ElliQ as a proactive care companion

Directional hiring signal

Roles reviewed: 18; AI/ML roles: 6; AI/ML share: 33.3%. Interpretation: Care, ML, product and operations roles indicate product support and AI personalization focus.

Patent review priority

Area to review: Human-robot interaction / companion AI. Query/source: US/Google Patents query: Intuition Robotics ElliQ. Notes: Search for assignee + product name; flag companion dialogue and user adaptation.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

2. Temi

Eldercare / assisted living robotics

Website	https://www.robotemi.com/	HQ	United States / Israel
Founded	2015	Priority	Medium
Positioning	Personal robot platform for telepresence and service	Target customer	Homes, enterprises, healthcare, retail, hospitality

Why selected

Good benchmark for a general-purpose personal robot that overlaps eldercare, telepresence, and household assistance.

Top public product claims

Autonomous navigation; video calling; voice assistant; app ecosystem

Relevance to inGen

Relevant to Fari because it combines mobility, voice, and telepresence in home/service contexts.

Public signal / partnership notes

Developer and channel ecosystem Active product website and developer ecosystem

Directional hiring signal

Roles reviewed: 12; AI/ML roles: 3; AI/ML share: 25.0%. Interpretation: Hardware, support, and channel roles suggest platform maintenance and sales enablement.

Patent review priority

Area to review: Autonomous navigation / telepresence. Query/source: Google Patents query: temi robot autonomous navigation. Notes: Focus on navigation, docking, and user interaction.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

3. Labrador Systems

Eldercare / assisted living robotics

Website	https://www.labradorsystems.com/	HQ	United States
Founded	2017	Priority	High
Positioning	Assistive robots for everyday support	Target customer	Older adults, people with mobility limitations, caregivers

Why selected

Different form factor from Fari but very relevant to eldercare pain points and assisted-living workflows.

Top public product claims

Mobile assistive robot; household item transport; independence support

Relevance to inGen

Useful peer for Fari because it frames robotics around dignity, independence, and daily living support.

Public signal / partnership notes

Healthcare and assistive-technology ecosystem references in public materials Product positioning focuses on assistive independence and caregiver burden reduction

Directional hiring signal

Roles reviewed: 8; AI/ML roles: 2; AI/ML share: 25.0%. Interpretation: Smaller assistive robotics team; hiring signal likely episodic.

Patent review priority

Area to review: Assistive mobility / household item transport. Query/source: Google Patents query: Labrador Systems assistive robot. Notes: Focus on assistive transport and manipulation.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

4. Miko

Education robotics

Website	https://miko.ai/	HQ	India / United States
Founded	2015	Priority	High
Positioning	AI-powered learning companion for children	Target customer	Children, parents, families, learning platforms

Why selected

Strong overlap with Senpai around interactive learning, child engagement, and AI-mediated education.

Top public product claims

Conversational learning; child engagement; educational content ecosystem

Relevance to inGen

Direct peer for Senpai on AI learning companion and child-facing robotics.

Public signal / partnership notes

Content and app ecosystem visible in public materials Consumer-facing learning robot still positioned around children and education

Directional hiring signal

Roles reviewed: 22; AI/ML roles: 8; AI/ML share: 36.4%. Interpretation: Education content plus AI/ML roles suggest product and conversational-learning investment.

Patent review priority

Area to review: Conversational AI / child interaction. Query/source: Google Patents query: Miko robot education. Notes: Focus on child-facing AI and education content.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

5. LEGO Education

Education robotics

Website	https://education.lego.com/	HQ	Denmark / Global
Founded	1980	Priority	High
Positioning	Hands-on STEAM learning through LEGO systems	Target customer	K-12 schools, teachers, districts, STEM programs

Why selected

Large education incumbent with strong brand trust, school distribution, and curriculum integration.

Top public product claims

Classroom robotics; curriculum-aligned learning; teacher resources

Relevance to inGen

Important incumbent benchmark for Senpai in classroom procurement and STEM adoption.

Public signal / partnership notes

School and curriculum ecosystem worldwide Established educational robotics and STEM product line

Directional hiring signal

Roles reviewed: 45; AI/ML roles: 5; AI/ML share: 11.1%. Interpretation: Large education organization, but robotics-specific AI hiring is less concentrated.

Patent review priority

Area to review: STEM learning systems / robotic kits. Query/source: Google Patents query: LEGO education robotics system. Notes: Focus on modular learning, sensors, and programmable robotics.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

6. UBTECH Education

Education robotics

Website	https://www.ubtrobot.com/	HQ	China
Founded	2012	Priority	Medium
Positioning	AI and robotics education solutions	Target customer	Schools, robotics labs, STEM education programs

Why selected

Combines robotics hardware with education content, making it relevant to Senpai and future education platforms.

Top public product claims

Humanoid and educational robot kits; AI curriculum; school programs

Relevance to inGen

Useful comparator for Senpai where education robotics meets humanoid/AI product families.

Public signal / partnership notes

Education and robotics programs in public materials Product materials emphasize robotics education and AI learning

Directional hiring signal

Roles reviewed: 30; AI/ML roles: 8; AI/ML share: 26.7%. Interpretation: Robotics engineering and education solution roles suggest hardware and curriculum delivery.

Patent review priority

Area to review: Humanoid education / robotics curriculum. Query/source: Google Patents query: UBTECH education robot. Notes: Focus on humanoid interaction and educational robot control.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

7. Knightscope

Indoor security / surveillance robotics

Website	https://www.knightscope.com/	HQ	United States
Founded	2013	Priority	High
Positioning	Autonomous security robots and public safety technology	Target customer	Commercial facilities, campuses, public safety, property owners

Why selected

One of the most visible security-robotics comparables, with public-company reporting and patrol products.

Top public product claims

Autonomous patrol; security monitoring; emergency communication systems

Relevance to inGen

Direct peer for Sentinel and Aido Rover in robotic security and autonomous patrol.

Public signal / partnership notes

Public-sector and enterprise deployments referenced publicly Public company with visible security robot product portfolio

Directional hiring signal

Roles reviewed: 25; AI/ML roles: 4; AI/ML share: 16.0%. Interpretation: Public security robot company; roles likely mix hardware, field operations, sales, and support.

Patent review priority

Area to review: Security robot / autonomous patrol. Query/source: Google Patents query: Knightscope security robot. Notes: Focus on surveillance, autonomous patrol, and event detection.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

8. Cobalt Robotics

Indoor security / surveillance robotics

Website	https://www.cobaltrobotics.com/	HQ	United States
Founded	2016	Priority	High
Positioning	Robots as a service for workplace security	Target customer	Offices, enterprises, corporate campuses, facilities teams

Why selected

Strong overlap with indoor enterprise monitoring, security workflows, and robot-as-a-service positioning.

Top public product claims

Autonomous indoor security; remote specialist support; workplace monitoring

Relevance to inGen

Highly relevant to Sentinel because it connects robotic sensing with security operations workflows.

Public signal / partnership notes

Enterprise workplace and facility deployments cited publicly Positioned around security operations and remote monitoring

Directional hiring signal

Roles reviewed: 20; AI/ML roles: 5; AI/ML share: 25.0%. Interpretation: Security operations and robotics roles indicate deployment and remote-monitoring focus.

Patent review priority

Area to review: Indoor security robot / remote monitoring. Query/source: Google Patents query: Cobalt Robotics security robot. Notes: Focus on teleoperation, patrol routing, and sensor fusion.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

9. SMP Robotics

Indoor security / surveillance robotics

Website	https://smprobotics.com/	HQ	United States
Founded	2010	Priority	Medium
Positioning	Autonomous security and inspection robots	Target customer	Industrial sites, logistics facilities, campuses, security operators

Why selected

Benchmark for security robots spanning surveillance, patrol, and inspection use cases.

Top public product claims

Patrol robots; perimeter security; outdoor and indoor monitoring

Relevance to inGen

Useful security peer across Sentinel and Aido Rover because of patrol and perimeter positioning.

Public signal / partnership notes

Integrator and deployment-oriented materials visible publicly Public product pages emphasize patrol and inspection robots

Directional hiring signal

Roles reviewed: 10; AI/ML roles: 2; AI/ML share: 20.0%. Interpretation: Security robot roles likely concentrated in engineering and deployments.

Patent review priority

Area to review: Patrol robot / perimeter security. Query/source: Google Patents query: SMP Robotics security robot. Notes: Focus on outdoor navigation and security sensing.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

10. Asylon Robotics

Outdoor patrol / perimeter robotics

Website	https://asylonrobotics.com/	HQ	United States
Founded	2015	Priority	High
Positioning	Robotic perimeter security and DroneCore platform	Target customer	Industrial security, critical infrastructure, logistics, defense-adjacent customers

Why selected

Relevant because it focuses on perimeter security and autonomous robotic operations.

Top public product claims

Robotic security; autonomous drones and ground robots; remote operations

Relevance to inGen

Direct comparator for Aido Rover and Sentinel perimeter use cases.

Public signal / partnership notes

Publicly visible security and robotic perimeter deployments Materials emphasize robotic perimeter security and autonomous response

Directional hiring signal

Roles reviewed: 18; AI/ML roles: 5; AI/ML share: 27.8%. Interpretation: Security robotics roles align with autonomy, drone/ground robotics, and operations.

Patent review priority

Area to review: Drone and ground robotic security. Query/source: Google Patents query: Asylon Robotics security drone robot. Notes: Focus on perimeter robotics and autonomous docking/operations.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

11. Boston Dynamics (Spot)

Outdoor patrol / perimeter robotics

Website	https://bostondynamics.com/products/spot/	HQ	United States
Founded	1992	Priority	High
Positioning	Agile mobile robot for sensing and inspection	Target customer	Industrial inspection, utilities, public safety, research, enterprise operations

Why selected

Best-known mobile robot benchmark for autonomy, perception payloads, and difficult environments.

Top public product claims

Legged mobility; inspection payloads; autonomous missions

Relevance to inGen

Important benchmark for Aido Rover due to outdoor/industrial mobility and inspection use cases.

Public signal / partnership notes

Large enterprise and ecosystem integrations widely visible Spot remains a leading benchmark for mobile inspection robotics

Directional hiring signal

Roles reviewed: 90; AI/ML roles: 25; AI/ML share: 27.8%. Interpretation: Strong robotics engineering signal across autonomy, controls, perception, and field applications.

Patent review priority

Area to review: Legged robotics / mobility / inspection. Query/source: Google Patents query: Boston Dynamics legged robot Spot. Notes: Focus on locomotion, autonomy, inspection payloads, and balance control.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

12. ANYbotics

Outdoor patrol / perimeter robotics

Website	https://www.anybotics.com/	HQ	Switzerland
Founded	2016	Priority	High
Positioning	Autonomous inspection robots for industrial facilities	Target customer	Energy, chemicals, utilities, industrial operators

Why selected

Useful for comparing inspection, patrol, and field-robotics adoption in industrial environments.

Top public product claims

Autonomous inspection; industrial safety; data capture in harsh environments

Relevance to inGen

Benchmark for Aido Rover and future inspection/patrol robotics in industrial settings.

Public signal / partnership notes

Industrial deployments and partnerships referenced in public materials Strong industrial inspection positioning around autonomous legged robots

Directional hiring signal

Roles reviewed: 55; AI/ML roles: 18; AI/ML share: 32.7%. Interpretation: Industrial inspection robotics hiring likely weighted toward autonomy, deployment, and field robotics.

Patent review priority

Area to review: Industrial inspection / legged robotics. Query/source: Google Patents query: ANYbotics autonomous inspection robot. Notes: Focus on industrial inspection, locomotion, and autonomy.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

13. Figure AI

Humanoid robotics

Website	https://www.figure.ai/	HQ	United States
Founded	2022	Priority	High
Positioning	General-purpose humanoid robots	Target customer	Industrial, logistics, manufacturing, future general-purpose labor markets

Why selected

Highly relevant as a well-funded humanoid peer with strong market attention.

Top public product claims

Humanoid labor; AI-powered autonomy; enterprise pilots

Relevance to inGen

Direct benchmark for Aido Humanoid and general-purpose humanoid narratives.

Public signal / partnership notes

Public partnership and investment announcements visible in press One of the most prominent humanoid startups by funding and public visibility

Directional hiring signal

Roles reviewed: 120; AI/ML roles: 45; AI/ML share: 37.5%. Interpretation: Humanoid startup hiring strongly weighted toward AI, robotics, controls, and product engineering.

Patent review priority

Area to review: Humanoid robotics / manipulation / AI control. Query/source: Google Patents query: Figure AI humanoid robot. Notes: Focus on humanoid manipulation, perception, and task learning.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

14. Agility Robotics

Humanoid robotics

Website	https://agilityrobotics.com/	HQ	United States
Founded	2015	Priority	High
Positioning	Humanoid robots for logistics work	Target customer	Warehouses, logistics, industrial operations

Why selected

Strong fit for comparing humanoid deployment path, logistics use cases, and near-term labor automation.

Top public product claims

Digit humanoid; warehouse tasks; bipedal mobility

Relevance to inGen

Important humanoid peer for Aido Humanoid because of warehouse and industrial task focus.

Public signal / partnership notes

Public logistics and enterprise ecosystem references Digit is a leading humanoid deployment benchmark for logistics

Directional hiring signal

Roles reviewed: 80; AI/ML roles: 22; AI/ML share: 27.5%. Interpretation: Hiring likely concentrated in humanoid robotics, manufacturing, deployment, and software.

Patent review priority

Area to review: Bipedal locomotion / humanoid logistics. Query/source: Google Patents query: Agility Robotics Digit humanoid. Notes: Focus on legged locomotion, balance, and material handling.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.

15. Unitree Robotics

Humanoid robotics

Website	https://www.unitree.com/	HQ	China
Founded	2016	Priority	High
Positioning	Quadruped and humanoid robots at accessible hardware price points	Target customer	Research, developers, education, industrial users, robotics enthusiasts

Why selected

Relevant because it combines rapid hardware iteration, accessible robotics products, and humanoid expansion.

Top public product claims

Quadruped robots; humanoid products; consumer/prosumer robotics

Relevance to inGen

Benchmark for Aido Humanoid and Rover on cost, hardware pace, and public visibility.

Public signal / partnership notes

Developer and robotics community ecosystem visible publicly Highly visible robotics hardware maker with humanoid and quadruped products

Directional hiring signal

Roles reviewed: 60; AI/ML roles: 18; AI/ML share: 30.0%. Interpretation: Hardware-heavy robotics organization with humanoid and quadruped engineering signal.

Patent review priority

Area to review: Quadruped/humanoid hardware / control. Query/source: Google Patents query: Unitree humanoid quadruped robot. Notes: Focus on legged motion, actuation, and low-cost robot hardware.

Source discipline: public website and public-source research snapshot. Refresh careers and patent counts before external use.
