

Third BI tool, different angle from Looker: an executive scorecard with traffic-light KPIs and drill-through to product detail. Built on the Week 7 synthetic warehouse.

“At a glance, is the business on target — and where isn’t it?” Eight RAG KPI tiles vs explicit targets; click any tile to drill through to that product’s detail page.

KPI	Target	DAX measure
Fleet active rate	≥ 95%	Fleet Active Rate %
Avg uptime / day	≥ 12 h	Avg Uptime (AVERAGE)
Critical resolution	≤ 8 h	Avg Resolution Hours (Critical)
Ticket resolve rate	≥ 90%	Resolve Rate %
Avg CSAT	≥ 4.0	Avg CSAT + CSAT Status
Win rate	≥ 35%	Win Rate %
Won value (TTM)	≥ \$150M	Won Value + Rolling 3M
Avg sales cycle	≤ 100 d	Avg Cycle (AVERAGE)

Page 1 — Scorecard (8 RAG tiles + bookings trend). Page 2 — Product detail (drill-through target): per-product fleet/support/sales with the product passed as filter. Slicers: date range + product + geography. Tile color is bound to a `... Status` measure (RAG); see docs/dax_measures.md.

Import the Week 7 warehouse tables (Get Data → DuckDB/ODBC, or the synthetic CSVs). Recreate the star relationships (facts→dims on the surrogate keys). Mark dim_date as the date table. Paste the 10 measures from docs/dax_measures.md. Lay out tiles per the prototype below; bind conditional formatting to the Status measures.

InGen — Executive Scorecard
Traffic-light KPIs vs target · Power BI (drill-through to product detail) · synthetic warehouse

Legend: ● On target ● Watch ● Off target

KPI	Value	Status	Target
Fleet active rate	96.0%	On target	≥ 95%
Avg uptime / day	14.7 h	On target	≥ 12 h
Critical resolution	7.1 h	On target	≤ 8 h
Ticket resolve rate	88%	Watch	≥ 90%
Avg CSAT	3.84/5	Watch	≥ 4.0
Win rate	36%	On target	≥ 35%
Won value (TTM)	\$197M	On target	≥ \$150M
Avg sales cycle	95 d	On target	≥ 100 d

PROTOTYPE — rendered from real Week 7 warehouse KPIs: build the nbix in Power BI Desktop (see spec: powerbi.pdf)

Note

The .pbix is assembled in Power BI Desktop (Windows). This spec + the DAX reference + the prototype make that ~30-min mechanical work; export to PDF from Power BI for the /reports/week09 PDF artifact. No .pbix is fabricated here — the prototype is rendered from real warehouse KPIs.
