

Dashboard Spec — Market & Competitive (Tableau Public)

Audience: InGen leadership + external stakeholders. Built from public data only.

Question it answers

“Across our five verticals, which markets are biggest, which are heating up now, and how do we compare to peers?” The Overview tab answers this on the first screen, no scrolling.

Tabs & panels

Tab	Panels	Source
Overview	Demand-index ranking · market attractiveness · public-peer margin↔R&D · private capital raised	Wk4-6
Verticals	Per-vertical: market size range, demand index, top customer pain points	Wk4-5
Peers	Public financials table (rev, GM, R&D%, margins) + private funding rounds (sourced)	Wk6
Demand	Search/news/sentiment trends; demand-index composition (stacked weights)	Wk5
Methodology	Sources, metric definitions, weights, caveats (EV/Rev computed live)	Wk4-6

Data sources (upload-ready extracts)

data/week08/extracts/: demand_index.csv, demand_signals_long.csv, peer_public_financials.csv, peer_private_funding.csv, market_sizing_summary.csv. Numeric TAM/SAM/SOM link to Week 4 market_sizing_workbook.xlsx.

Filters & interactions

Global filters: **Vertical** (All/each) and **Wave** (latest/prior). Filters apply across all tabs; selecting a vertical cross-highlights its bar in every panel. No broken states (all panels share the vertical key).

Chart types (and why)

Ranked horizontal bars for the index and attractiveness (easy comparison of ordered categories); scatter for margin↔R&D; (two continuous measures); horizontal bars for capital raised. No pie charts.

Prototype

Success criteria (from plan)

Loads <5s · answers its question on the first screen · color-blind-safe palette (Okabe-Ito) · filters update all charts coherently. Publishing produces the public Tableau URL (done in the user's account).

Note	This spec + extracts make the Tableau build mechanical. The live URL is created by publishin
